

Installation Guide

7106 7206 7010
Ethernet Interface

This guide explains how to install the Ethernet LAN card in your label printer.

You should consult your dealer or distributor for more information if you are not completely sure of how to perform this operation.

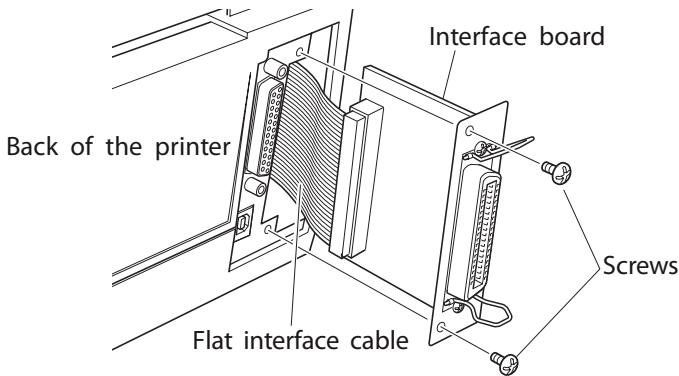

Caution

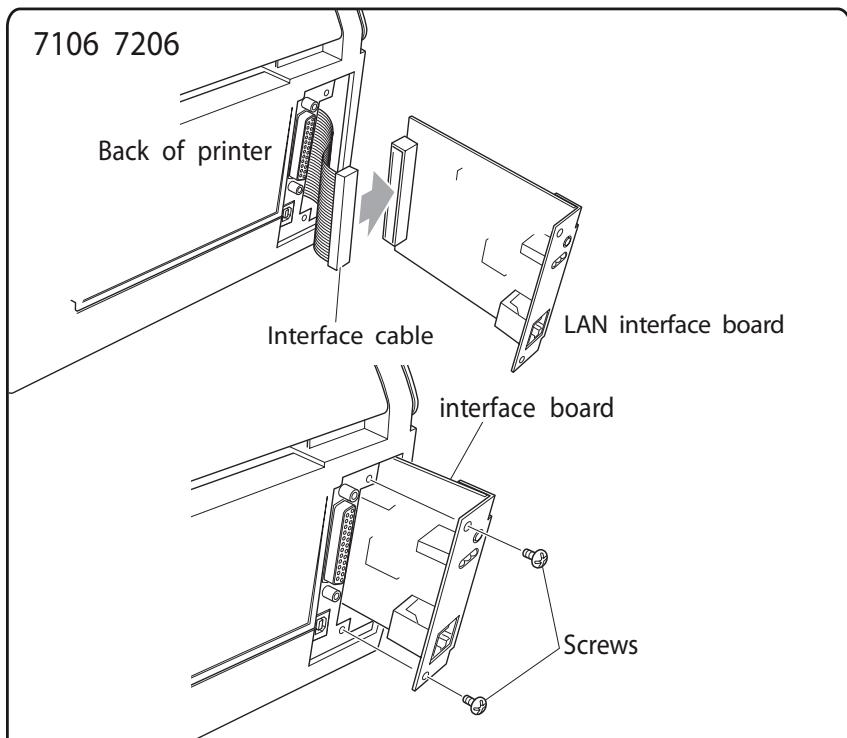

Always turn off the power to the printer and remove the power cord before replacing the interface board.

Replacing the Interface Board

1. Remove the two screws that fix the bracket of the parallel interface board to the printer. Then gently pull the interface board towards you. When you do this, be careful not catch or damage the connecting cable. Do not pull the cable too much as this could also cause damage.

2. Remove the connecting cable from the interface board and reconnect the cable to the connector of the new interface board.
3. Insert the interface board into the printer so that the connecting cable does not catch on the printer. The new board is slightly larger than the original board, so the interface cable will need to be tucked in carefully.
4. Use the two screws that you removed to re-fix the bracket in place.

7010

Attention:

Please insert the Ethernet board by bending the cable as shown in the picture.

Testing the Interface Board

5. To test the interface board's correct operation, connect the power cord and the ethernet cable to the printer, insert some standard media, preferably 4" x 4" labels, (100mm x 100mm), then switch on the power.

6. Briefly press the blue button visible on the new interface's bracket.
This will produce an "network self-test page".
If you have an ethernet cable connected the "network self-test page" will show you details of any network parameters already configured.

```

Configuring the Interface using Explorer

8. To configure the network board, you can use the “PrintServer Network Tools” included on the CD supplied with the printer. However, the easiest way to configure the board is to use a Web Browser, such as Internet Explorer, running on a PC connected to the same network.

The image shows two windows side-by-side. The left window is titled "Print server homepage" and displays the "Tally Dascom 7010 PRINTSERVER Homepage". It includes sections for General (Home, Printer), Status (General, Printer Port, IPv6, NetWare, Job History), Configuration (General, Printer Port, TCP/IP, IPv6, Microsoft Windows, NetWare, DNS, Mail, Time, Notification, Protection, Logical Printers, Certificates), and Actions (Restart, Default Settings, Download Area). A language selection bar at the bottom shows flags for various countries. The right window is titled "PRINTSERVER-NetTool - 1.8.41" and shows a list of network devices. The table has columns for IP-Adresse, NetWare Name, Typ, Version, Drucker, and Port Status. The data is as follows:

IP-Adresse	NetWare Name	Typ	Version	Drucker	Port Status
172.020.070.089	ICOC61A9	PRI...	10.2.329	7010-300	OK
172.020.070.088	ICOC614F	PRI...	10.2.329	7010	OK
172.020.070.084	ICOC613B	PRI...	10.2.329	7206	OK
172.016.131.038	ICOC6BA2	PS03a	10.2.16		
172.016.131.030	ICOC645C	PS03a	10.2.13		

9. If you have a “DHCP Server” operating on your network (a system that ‘gives out’ network addresses to new equipment), you can easily find out the address allocated to the printer by briefly press the blue button visible on the network board’s bracket. This will generate the “network self-test page”, shown on the previous page.

10. On the self-test, under the TCP/IP section, there will be a line saying "IP address" together with four groups of digits separated by dots. It should also say "asigned by DHCP" next to it.
11. Start "Internet Explorer" or a similar web browser on a PC connected to the same network. When entering this network address, you should remove the 'leading zeros' on the address. So for example you have to type "192.168.0.65" in to the address bar.
12. To 'force' a new IP address for the printer, click on the TCPIP menu under the configuration section. Type in the new address in the 'IP address' line and adjust any other parameters. It is also very important that you untick the DHCP box, otherwise the printer will continue to take its address from the DHCP server, rather than using the new address you typed in.

For further information, please contact our local administrator.
